

BRIDGEWAY HOPE

Reclaim Your Child's Love of Learning

One in five students have learning disabilities. Others struggle with no diagnosis. When your child has a learning disability, school is more than a challenge — it's a chore.

BUT THERE IS HOPE.

Famous people like Walt Disney, Tom Cruise, Tim Tebow, and yes, Harry Potter himself: Daniel Radcliffe, have overcome learning disabilities to lead highly successful lives. Your child can do the same.

Bridgeway Academy's HOPE program, in partnership with the Essential Learning Institute (ELI), creates customized homeschool programs using multisensory therapy that helps struggling students overcome learning challenges.

Each HOPE Total Care Package Includes

- A full year of customized homeschool curriculum using well-known homeschool publishers.
- 9 months of sensory integration-based learning disability therapy.
- Consistent monitoring and feedback reports.
- Post-program testing and individualized support.
- Dedicated support from a certified advisor.

Learning Doesn't Have to Hurt

If your child suffers from a learning disability, you know the pain that comes with watching them struggle or fail day-in and day-out. And you have seen those struggles go beyond academics. Many students with learning disabilities have difficulty with communication and a lack of self-confidence that follows them right into adulthood.

But there is **HOPE**.

Bridgeway Academy has partnered with the Essential Learning Institute (ELI) to combine a customized homeschool program with a multisensory therapy that is changing the lives of struggling students.

The HOPE therapy provides dramatic gains in reading, writing, speaking, spelling and comprehension. This computer-based therapy program uses a series of visual, auditory, and writing exercises to "retrain the brain" and create new neurological pathways. These pathways work to heal the brain and improve memory, language, and processing skills.

This Healing Process Includes

- A full learning and academic evaluation.
- Individualized sensory integration therapy.
- Consistent monitoring and feedback.

With our program, your child's memory, processing skills, and academic progress will permanently improve.

"I cannot believe the improvement in my son after only four short months on the program. His memory has improved so much! He is now doing better than his brother who is two years older and does not have a learning disability."

Eric V., Quebec
